

# Keratoconus diagnostic monitoring clinic with virtual review

You have been diagnosed with Keratoconus and deemed to have low risk of progression. Due to the nature of this corneal condition, you require regular monitoring in our diagnostic review clinic to check for any deterioration.

At your next routine review, you will be asked to attend for diagnostic testing, vision assessment and to answer a standard questionnaire about your eyes.

You will not see a Doctor.

It is very important that you do not wear your contact lenses for 2 weeks (or the same length of time previously agreed) prior to the appointment as they may alter the shape of the front of your eye and render the scans invalid.

Please ensure you have visited your own optometrist before your next appointment and bring your most recent prescription with you. This will help us look for changes.

Once we have collected all the information, your results will then be reviewed by one of the Corneal specialists on a different date. You will not have to attend this appointment. A letter will then be sent out to advise you of the outcomes of the diagnostic appointment and next steps.

If you have any comments about this leaflet or the service you have received you can contact :
