

Neurophysiology

Having an CTS

appointment +	You are coming to hospital for a CTS test. This looks at how your nerves work in your arms and hands and can see if a nerve is trapped or damaged, helping doctors work out how to look after you.
	First, we will clean small areas of your arms and hands. This will not hurt.
	Next, we will put some small stickers where we have cleaned on your arms and hands.
	We will join the stickers to the machine with wires and pass a small current through the stickers to your arms, which does not hurt but might tingle and make your muscles twitch a little for a very short time.
wetwipe	When the test is finished, we will take off the stickers and wipe your arms and hands again.
home	If you are not having any other tests, you can go home.
any questions	Please ask us if you have any questions.
