Having a VEP

You are coming to hospital for an VEP test. This looks at how your eyes and brain work, helping doctors work out how to look after you. Your brain works using signals. When the

Your brain works using signals. When the brain is made to react to something, the signals change. The VEP test records these changes.

First, we will clean small areas of your head with a cotton bud. This will not hurt.

Next, we will put some silver discs with stickers where we have cleaned on your head.

We will join the stickers to the VEP machine with wires. This will not hurt.
You may have to look at a flashing light. Sometimes, you look at a picture on a television screen.
When the VEP is finished, we will take off the stickers and wipe your head again.
If you are not having any other tests, you can go home.
Please ask us if you have any questions.
