

Physiotherapy Department

Exercises for patients following Arthroscopy

It is important following surgery that you look after your wound when you are discharged home.

Wound Care: The bandage can be removed according to your consultants protocol. Please discuss further with nursing staff on the unit. Baths and showers are only permitted if the wound can be kept dry.

Ice: Treat swelling with a bag of ice for 10-15 minutes up to 4 times a day. Always use a damp tea towel to cover the skin to avoid ice burn.

Walking and Stairs: You will be provided with elbow crutches after your surgery. When you can walk without a limp, they can be returned to the physiotherapy department. It is common to experience aching or discomfort in the knee, as this improves walking should become easier. You may find climbing stairs one at a time easier, ascend stairs using good leg first, and descend stairs using operated leg first.

Driving: You must not drive for 7 – 10 days following surgery. You may then commence driving when you feel confident to do so and when you are certain you can perform an emergency stop. Please also contact your individual insurance company to check your policy.

Sport: If you play a sport or have a hobby/interest of a physical or demanding nature you will need to check with your consultant or physiotherapist around how soon you can safely return to this activity.

Out Patient Appointment: You will be given an appointment before discharge from hospital or one may be posted to you. The appointment will be in approximately 6 weeks.

Work: You will need to follow your consultant's instructions depending on the complexity of your surgery and your job role.

Contact Details:

Day Procedure Unit CRH - Monday to Friday

Telephone No: 01422 223748 / 223749

Day Surgery Unit HRI - Monday to Friday

Telephone No: 01484 342111

Ward 8A - Monday to Sunday 24 hours a day

Telephone No: 01422 223801

The physiotherapy team will show you how to perform the exercises in this booklet.

It is in your best interests to continue these exercises when you go home. Failure to do so may lead to a poor recovery.

Following your operation you will have some pain. The exercises are to be performed to discomfort not pain. If you are unable to perform any of these exercises due to excessive pain or anything else, please inform a member of staff.

The repetition of each exercise may vary and is stated clearly under each one.

Bed Exercises

1. Static Quads

Tighten thigh muscles to flatten knee

X

per day
