

Infection Prevention and Control Department

Keeping you safe in hospital

While the risk of acquiring an infection whilst in hospital is low, you can play an important role in reducing the risks.

What should you do to get ready to come in to hospital?

- ✓ Good personal hygiene is important so bring personal toiletries.
- ✓ Good oral care can help prevent chest infections, so remember your toothbrush, toothpaste, floss etc.
- ✓ Bring slippers / shoes with a good grip, and any walking aids that you use. Many wards encourage you to wear your day clothes. This helps with your recovery.
- ✓ Please tell us if you have MRSA, C.Diff, CPE or any other infection. This will help us to ensure you have the right care including any necessary antibiotics.

How can you help whilst in hospital?

Hand hygiene is the most important thing you can do to protect yourself from infection and prevent the spread to others. The steps are illustrated here and hand wash basins.

5 moments for hand hygiene

-  After using the toilet, commode, bed pan or after handling nappies.
-  Before meal times.
-  If you need to touch any breaks in your skin – wounds, dressings or tubes.
-  After coughing, sneezing or touching your mouth or nose.
-  After leaving or returning to your bed/chair.

If you need assistance please ask a member of staff to help you. Also, if you are concerned a member of staff has not cleaned their hands it is ok to remind them or speak to a member of staff.

Other things you can do:-

- If possible sit up for all meals, either on your chair or at the edge of your bed.
- Deep breathing exercises and gentle body movements throughout the day will help you fight infections.
- Let your nurse know if you have any episodes of diarrhoea. It may be caused by an infection.
- Avoid touching any drains or tubes as these are a route in for infection. If you need help with these, ask a member of staff.
- Keep your locker and bed-table free from clutter so the domestic team/ward staff can keep your environment clean.
- You may be allocated a side room if you have an infection. It is important you and your visitors are aware of the standards to be met in your side room. These will be displayed on a poster in your room.

What should you expect from your hospital team?

We promote high standards from all our staff to keep you and other patients safe.

The following is what you can expect:-

- Staff will be **'bare below the elbow'**. This means they have no rings except a plain wedding band, no watches or bracelets, long nails or nail varnish.
- Before and after touching you hand hygiene is performed.
- Staff may wear goggles, mask, an apron (or plastic gown) and gloves when in contact with you.
- Staff will wear disposable gloves if they are at risk of handling blood or bodily fluids.

In addition, the whole ward including the bathrooms/toilets and your bed area are cleaned regularly. If you or your visitors see something that looks unclean, let a member of staff know.

Advice for visitors

If your family or friends have a cold, flu or covid-19 like symptoms or an upset stomach please ask them not to visit until they are fully recovered. All visitors will be required to follow any requirements put in place by the hospital, department or ward to control infection, including when and where to wear a mask.

Visitors and staff are not to sit on your bed, extra chairs are available.

Facilities for storing food brought into the hospital is not available, as such we cannot accept food that requires refrigeration such as fresh or artificial cream products, raw or cooked meat, fish or poultry, pre-wrapped sandwiches. Some pre-packed dried food is permissible such as biscuits, crackers, muffins, teacakes and drinks in plastic bottles.

The Trust has a legal obligation to comply with the requirements of the Food Safety Act 1990 and associated legislation relating to the composition, labelling, safety, handling, control and hygiene of food. As such we respectfully ask for your support in this.
